

Getting Started with The Vicks Germ Free Cool Moisture Humidifier: V3900

To get the most out of your Vicks Germ Free Cool Moisture Humidifier follow these helpful steps:

1. Place your humidifier on a firm, level, water resistant surface at least six inches from the wall, out of the reach of children and pets.

2. Remove the water tank from the unit. Fill with cool water and secure the tank cap, making sure it is properly sealed.

3. Soak the filter in cool water. Do NOT wring filter.

4. Insert new filter into unit by gently folding and inserting into filter slot.

5. If you are using Vicks VapoPads, insert scent pad with angled side facing downward into the VapoPad slot.

6. Replace the water tank. Set fan speed to High for Max Moisture, Medium for Everyday Moisture, or Low for Nighttime sound sleep mode.

Filter Information

To maintain the life of your filter, be sure to let it air dry when the humidifier is not in use.

Over time, your filter will discolor because it is absorbing the minerals out of your water - this is normal. For even mineral saturation and extended filter life, be sure to flip the filter, from top to bottom, with each filling of the tank.

To clean your filter, never use any chemicals and only use cool water. Be sure to let it air dry - do not squeeze the filter since that could damage the structure.
